Telehandler Training Courses Ontario

Telehandler Training Courses Ontario - Employers are responsible for making certain that their operating personnel and supervisors are trained to work competently making use of telehandler equipment. The competence level of staff should be assessed. If deficiencies are found, employers should provide training so that workers obtain the needed level of skill. The level of responsibility of the person should be taken into consideration when training is offered. Effective training will solve any deficiencies in the skills, understanding and knowledge of telehandler operators and supervisors. Training can be undertaken by engaging the services of an external training provider or through in-house sessions. An assessment upon finishing the training period will determine whether or not the learning goals have been met.

Federal, state/provincial and local rules set out guidelines for basic telehandler operator testing and training. Basic training does not deal with such topics as the lifting of suspended loads, the lifting of people, the use of rotating equipment or utilizing different attachments. Further training should be undertaken if such tasks are required on the work site.

Inspection and maintenance
Like whatever machinery, a telehandler needs effective maintenance. The machine inevitably will suffer wear eventually. Right maintenance is essential to ensuring safe operation of the telehandler machinery. Checks and inspections are important to ongoing maintenance procedures. Operators need to have machine-specific training to be able to prevent, rectify and monitor problems associated with damage, wear and deterioration. Workers require experience and competence in both breakdown and periodic maintenance. The manufacturer's preventative maintenance directions must be seriously viewed and followed, considering such factors as frequency of use and environmental circumstances in the work setting.

The responsibility for ensuring that the telehandler and its attachments are in good working order lies with both the owner and the user of the machine. Pre-use checks are typically carried out by the user, whilst general maintenance is usually performed by the telehandler owner.
