Counterbalance Forklift License Ontario

Counterbalance Forklift License Ontario - Forklifts, when operated by completely trained employees, are a major asset to companies. We offer a thorough training program covering all aspects of operating a powered lift device. Counterbalance forklift training provides operators of forklifts with the knowledge and practical skills considered necessary so as to operate forklifts safely and efficiently. The particular program provides a combination of classroom theory, hands-on training and participant observation in a warehouse-type environment. Training could be on site and/or customized.

The course covers the fundamentals of powered lift trucks, such as rules and regulations, components, load centres and factors affecting stability. General operating procedures are taught, like for instance startup, circle check, forward/reverse on level ground, shutdown, and operating around other people. Load handling topics consist of load pickup and placement, selection of loads, load security and integrity, loading and off-loading trailers. Participants would learn operational maintenance procedures, like for instance recharging and refueling. Safety concerns within the workplace would be discussed. Those participating will know the environmental conditions affecting the performance of the lift truck and be able to recognize possible dangers. Advanced training on propane handling can be incorporated.

Employees and their employers might face penalties if they do not operate according to industry and national standards. Workers operating a counterbalance forklift must be knowledgeable concerning the safe operation rules of their forklift. Training is recommended for any person applying for work which needs forklift operation.

Within our small personalized classes, we provide both hands-on training and in-class theory. The options for personalized training would include refresher or entry level courses.
