

## Boom Lifts

Boom Lifts Training Ontario - Boom Lifts are a table lift piece of equipment which could be lifted or lowered to varying heights, making this machine a functional instrument for certain manufacturing applications. There are many different varieties of Boom Lift consisting of knuckle booms, scissor lifts, and aerial hoists, each operating differently.

Aerial lifts are most normally used to carry people at skiing lodges who are not comfortable with a ski lift. These platform lifts maneuver much like an elevator, skiers may be slowly but surely shuffled up the mountain, stopping at stations along the route until they arrive at the top. Aerial hoists are also utilized in construction, transporting personnel safely up and down the sides of multi-level building sites.

Scissor hoists are quite frequently used by utility providers as the perfect way to safely permit workers to mend and work on cables and wires attached to poles. Telephone, cable and power companies have relied on the effectiveness of this type of boom lift for years.

Knuckle boom forklifts are built to be used in coarse terrain locales where the need to be able to reverse direction is necessary. This type of boom is able to fit into many tight spaces that a scissor lift cannot. Working amid multiple machines in a production facility or in near proximity sandwiched between two walls, the knuckle boom additionally features a standard table outfitted with rails for security and employee safety.

Depending on the job requirements and the sort of work to be completed will establish the right model of boom lift to decide on. Luckily, there is a model suited for almost any application.
